Ebuka Umeh

Chief Technology Officer @ Stackrise | Full-Stack Developer | AI
Chatbots | Data & Performance Analytics
Leeds, England, United Kingdom

Summary

I build end-to-end digital systems that combine full-stack web development, AI chatbots, data analytics and geospatial analytics to solve real business problems.

I work across React, Node.js, APIs, and databases, and use SQL, Excel, Power BI, Tableau, Python, and geospatial tools to turn raw data into clear, decision-ready insights. I've delivered multiple SaaS products, automated performance dashboards, automated reporting solutions, and AI-driven tools across healthcare, consulting, and analytics-led environments, integrating smart, specialized chatbots where necessary.

My focus is simple: build intelligent products, automate where it matters, and use data including spatial insights to drive measurable impact.

Let's connect if you're building or scaling data-driven products.
